### SUMMARY

I am an Adelaide-based junior web developer with additional backgrounds in Graphic Design and Food Science and Technology. I found my interest in Computer Science after migrating to Australia, so I firmly decided to pursue a career as a software developer. My strengths reside in my inquisitive approach to pinpoint attention to detail, problem-solving, and deep-rooted passion for learning when tackling critical projects and making projects better using user-friendly UX combined with my design philosophy.

I am now due to complete General Assembly's Software Engineering immersive program and am seeking opportunities to apply my skills in software development as well as the experience of team and customer management to build applications with great user experience.

### EXPERIENCE

#### STORE MANAGER

**Miyabi Sushi**  
2016 - 2022

- Managed a small team to run a retail store efficiently, which included staffing as well as procurement, making the store one of the most profitable sites.
- Provided customer services and managed customer relationships, listening to their feedback and constantly improving product and service quality.
- Improved team productivity by actively engaging with each team member, providing support and addressing issues with them, which helped us build an effective and moral team.

#### FOOD TECHNOLOGIST

**Nestls (China)**  
2014 - 2016

- Demonstrated strong analytical skills in new product requirements and specifications, collaborating with stakeholders and coordinating tasks across different departments and preparing final documentation.
- Exhibited comprehensive abilities to conduct research both individually and as a team.
- Developed a brand-new product from requirements to production, conducting analysis, development and organising tests and trials as well as putting it on the market.
